Duran bar

Payments

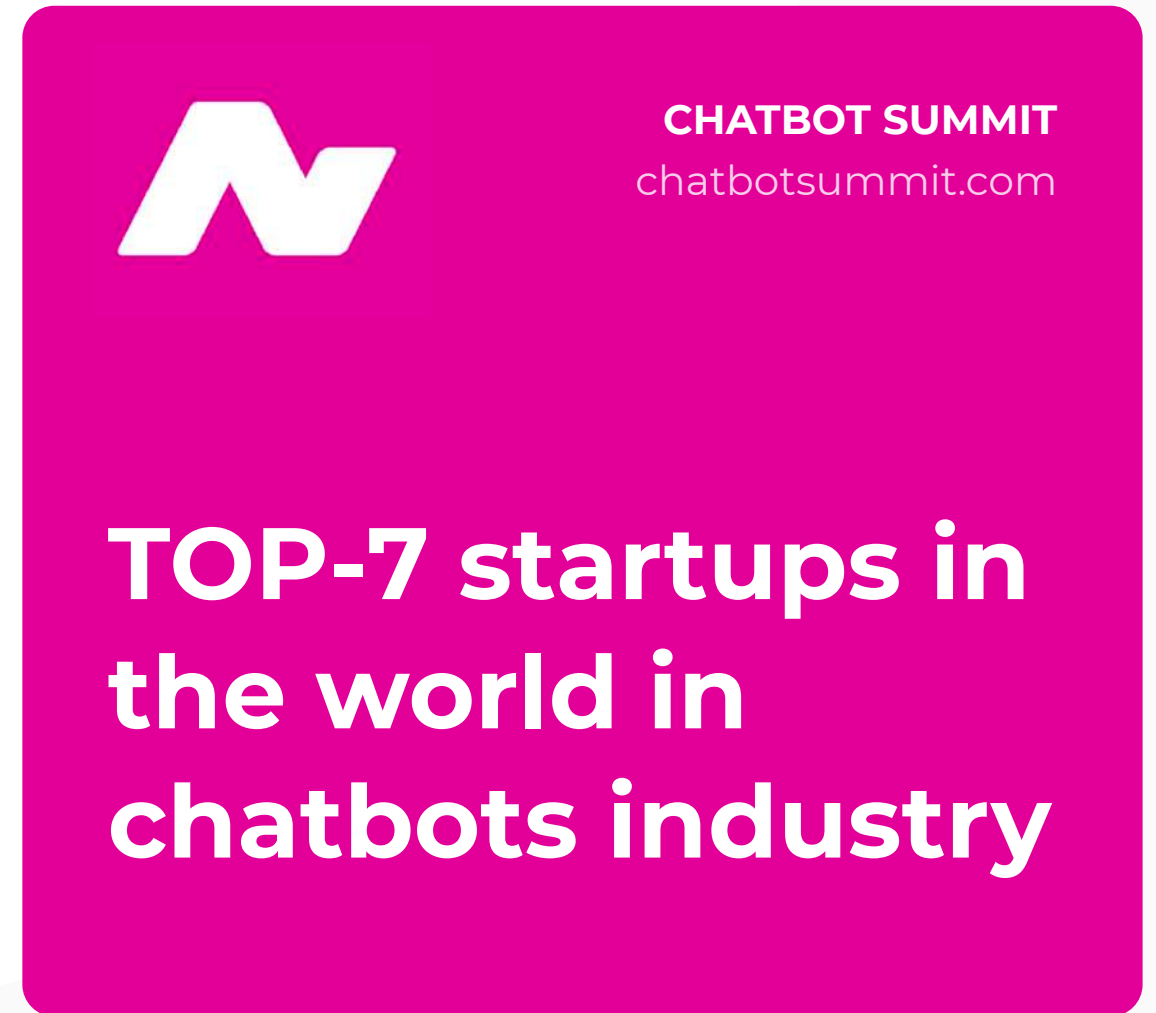

We Will use Gramm Crypto Currency and TON payments* as a one of main payments system for our products and our clients, because that's :

- Safety
- Faster
- Cheaper
- Much more easy for our clients

*TON Payments has a high-speed “micropayment” mode, when small payments are not immediately displayed on the blockchain (off-chain). To ensure reliability, a system of “pledges” of validators is used, and each processing node pays a deposit in case of errors. A pledge to validators is provided by the “nominees”. The node cannot do operations for more than the amount of the deposit. In the event of a processing error, the validator and the nominator lose their pledge, which is sent by other validators to cover the costs of the failed operation

Winners

Our Team

Georgii Galoian (@GeorgeG)

IT and blockchain entrepreneur.

Founder of s-commerce platform U-Robot (u-robot.net)

Founder of the startup community "WORLDofSTARTUPS".
(T.me/worldofstartups)
